Problem – Solution Fit

Source-grounded fit for the ServiceNow spreadsheet import workflow.

1. Problem

- Bulk employee data is received in Excel format and needs to be migrated into ServiceNow efficiently and accurately.
- The spreadsheet must first be loaded into an Import Set staging table before transformation.
- Repeated imports can contain existing employee records, creating a need to prevent duplicate inserts.

2. Required Workflow

- Create Employee Test (u_employee_test) with Employee ID, Employee Name, Email, Department and Location.
- Create Employee Import (u_employee_import).
- Create Sample Spreadsheet Import with Employee Import as source and Employee Test as target.
- Map source and target fields using Auto Map Matching Fields and Mapping Assist.
- Run Transform and verify the Employee Test records.

3. Solution Fit

- Import Set provides the staging area described in the source.
- Transform Map performs the source-to-target mapping and transformation.
- Coalesce updates matching records and prevents duplicate insertion.
- Transform History shows Inserted, Updated and Ignored outcomes.
- Reports and Employee Analytics Dashboards provide centralized visibility.

4. Documented Evidence

The source records 4 rows in the first repeated-data test: 2 were inserted and 2 were updated. When the same sheet was uploaded again, 0 were inserted, 0 were updated and 4 were ignored.

- From the above figure : total 4 rows are uploaded out of 2 are Inserted that are two new ID's.
- And 2 rows are updates that are Same ID's with different Name and different Email that we changed.
- Then Open the Employee Tests table and see the rows updated and inserted.

- Now Repeat the Phase 7 with the same steps and same Excel sheet and Submit to check how many rows are updated and Inserted with the same data.
- Then Open the Transform history to check.

Started	State	Completed	Run time	Set	Import set table	Total	Inserts	Updates	Ignored	Skipped	Errors	Transform Map

- Here we can see the total 4 are uploaded.
- On that 0 rows are Inserted and updates 0 and Ignored 4 rows.
- That same sheet we uploaded to the same transform map we created.
