

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Team ID	SWTID-2026-8426
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Create Employee Test table	Create Employee Test (u_employee_test) and add Employee ID, Employee Name, Email, Department and Location fields.
FR-2	Load Import Set data	Create Employee Import (u_employee_import) and load the spreadsheet as the staging data.
FR-3	Create Transform Map	Create Sample Spreadsheet Import with Employee Import as Source Table and Employee Test as Target Table.
FR-4	Map source and target fields	Use Auto Map Matching Fields and Mapping Assist to map the source and target fields.
FR-5	Transform and validate	Run Transform and verify that records are created in Employee Test.
FR-6	Prevent duplicates with Coalesce	Set a field map to Coalesce True so repeated imports do not insert duplicate records.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Data integrity	The imported values should remain consistent between the spreadsheet, Import Set and Employee Test.
NFR-2	Reliability	The Transform should complete successfully and show clear outcomes in Transform History.
NFR-3	Maintainability	The Transform Map and field mappings should remain reviewable and configurable.
NFR-4	Usability	Administrators should be able to follow the documented Load Data, Transform and validation steps.
NFR-5	Duplicate control	Coalesce should identify existing records and avoid redundant inserts.
NFR-6	Visibility	Reports and the Employee Analytics Dashboards should provide a centralized view of employee data.
